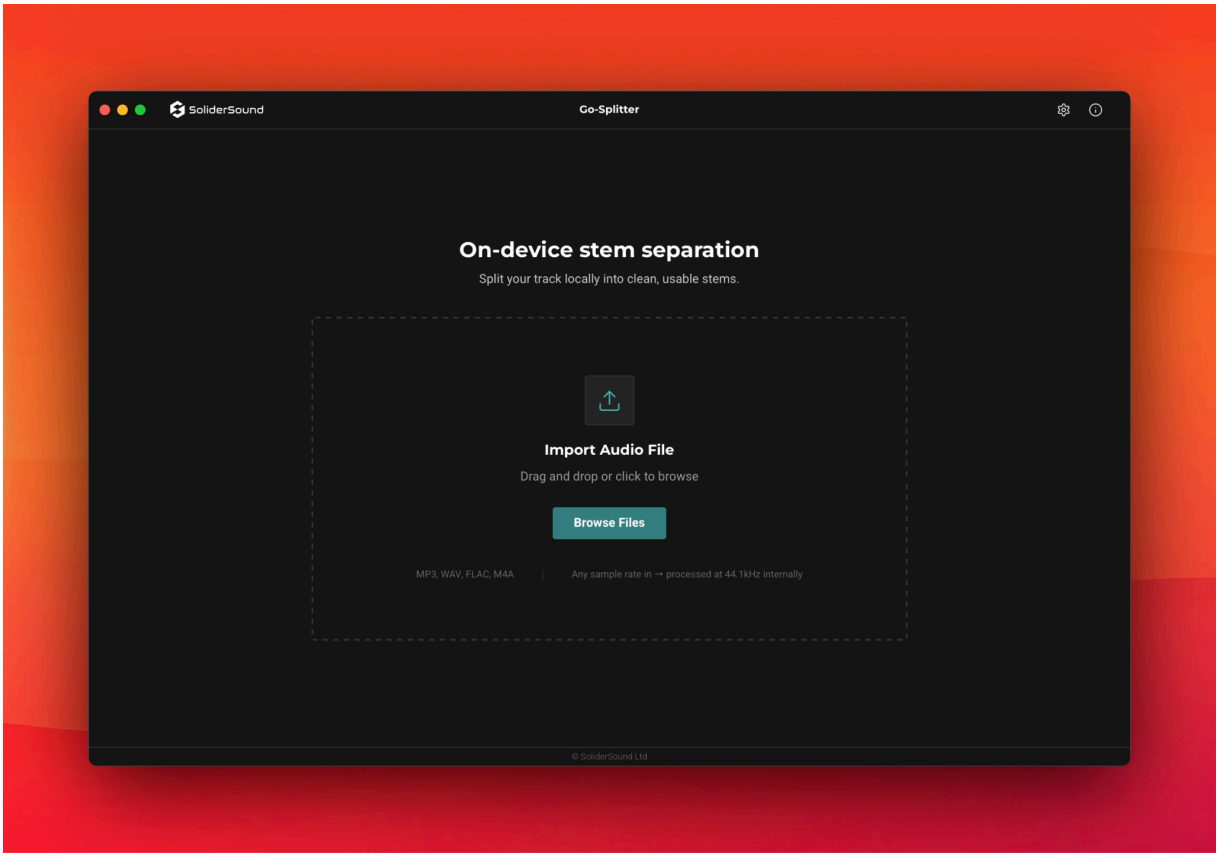
PRESS RELEASE

SoliderSound Releases Go-Splitter - Free macOS Desktop Application

SoliderSound has launched **Go-Splitter**, a high-performance stem separation application for **macOS Apple Silicon** and it's available for **free download**. This desktop tool allows producers and engineers to deconstruct full mixes into four DAW-ready WAV stems including Vocals, Drums, Bass, and Other, with unprecedented precision and speed.

While many separation tools rely on cloud-based processing, Go-Splitter operates entirely on-device using a custom, high-precision neural-network engine. This ensures a fully offline workflow with total privacy and zero latency. Heavily optimised for Apple Silicon, the app delivers lightning-fast processing that keeps professional workflows moving without the need for a constant internet connection or recurring subscription fees. (A dedicated Windows version is slated for release in the coming days)

Designed for those who require surgical control over their audio, Go-Splitter includes speed/quality presets, and advanced artefact suppression to ensure the cleanest possible results for remixing, sampling, or restoration. It offers unlimited processing with no usage caps, advanced quality controls, and a streamlined ZIP export function for easy session management.



Go-Splitter features

- Neural network on-device stem separation processing (local processing workflow)
- 4-stem output: Vocals, Drums, Bass, Other (DAW-ready WAV)
- Preview-first results mixer (waveforms + instant audition)
- Export All (ZIP bundle of all stems)
- Per-stem WAV download
- Quality presets: Fast / Balanced / High Quality
- Advanced engine controls: batch size + overlap tuning
- Apple Silicon–optimised processing path
- Drag-and-drop + browse import (simple ingest flow)

Pricing and availability

Go-Splitter is now available at solidersound.com for Free download.

The SoliderSound Go-Splitter can be downloaded as a .dmg installer for **macOS Apple silicon only**. (The Windows version will be available soon.)
