PRESS RELEASE

SoliderSound Launches Go-Denoise Professional audio restoration app for Mac and Windows

SoliderSound has launched Go-Denoise, a professional-grade desktop audio restoration app that removes background noise and recording contamination from speech and singing vocals while preserving clarity, tone, and natural detail. It runs fully on-device, with fast offline processing, a simple drag-and-drop workflow, and no subscription.

Go-Denoise processes vocals directly in the complex frequency domain, preserving both magnitude and phase information rather than reconstructing the voice from a simplified representation. It removes background noise and restores vocal detail in a single neural pass, avoiding multi-stage resynthesis chains that can compound artefacts.

Go-Denoise Use Cases

- **Home recording**: Removes fans, room ambience, computer noise, and everyday background sound.
- **Singing vocal cleanup**: Recovers clean vocal takes without stripping away tone, detail, or expression.
- **Podcast & voiceover repair**: Cleans speech recordings affected by traffic, hum, distant voices, or poor rooms.
- **Remote collaboration**: Fixes inconsistent recordings sent by artists, clients, guests, or collaborators.
- **Location recording**: Users can record outside the studio and remove environmental noise afterward.
- **Content creation**: Improves vocals for videos, livestreams, courses, interviews, and social content.
- **Archive restoration**: Rescues older or irreplaceable recordings affected by persistent background noise.

Pricing and availability

Go-Denoise is now available at solidersound.com for an introductory price of 38.00 USD until July 31, 2026.

The original price will be 78.00 USD after July 31, 2026.
Existing SoliderSound premium product users can upgrade for USD 28 during the introductory period.

Free trial

A fully functional free trial of Go-Denoise is available on the SoliderSound website, allowing users to process up to six audio files before purchasing.

The SoliderSound Go-Denoise can be downloaded as a .dmg installer for **macOS Apple silicon**, and MSI installer for **Microsoft Windows**.
