

SoliderSound

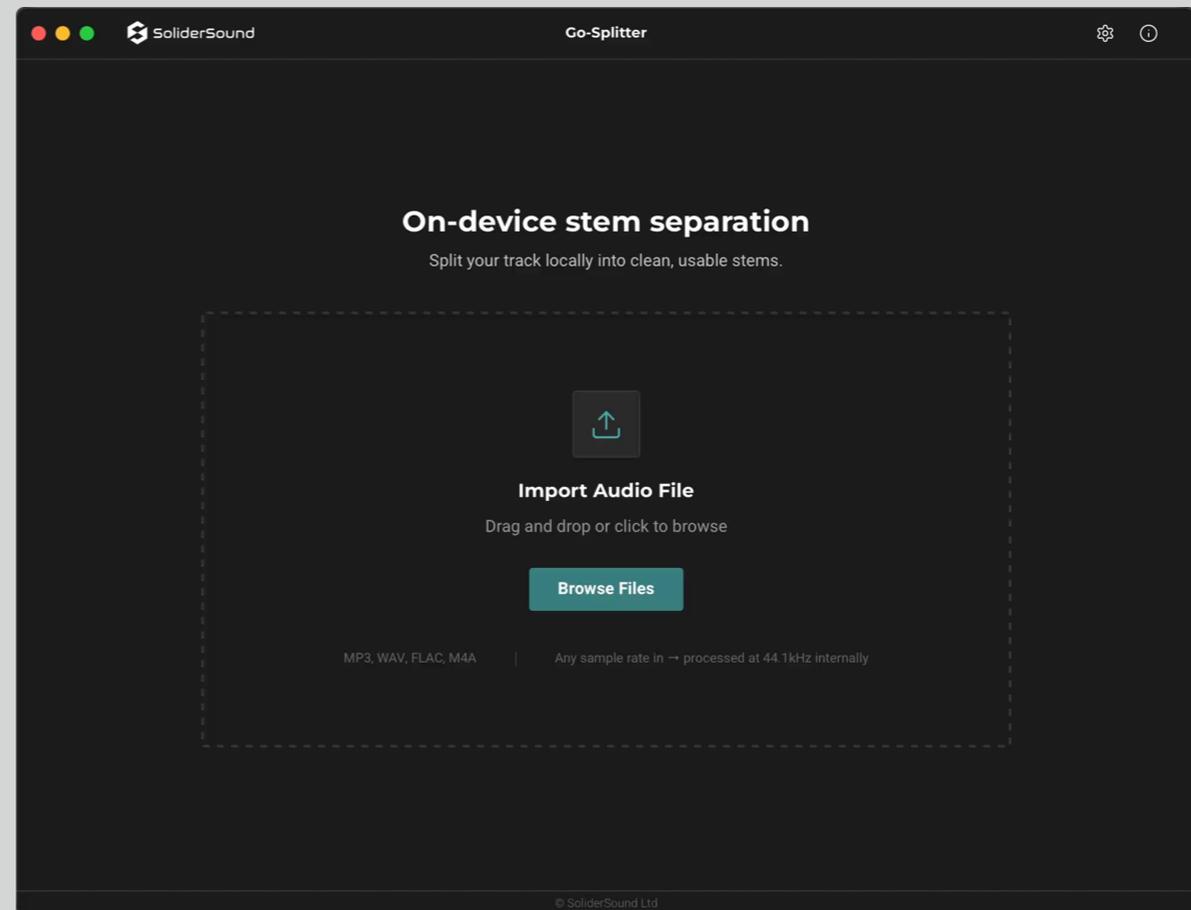

Go-Splitter User Manual

Overview

Go-Splitter is a desktop app for macOS and Windows that separates a full mix into four DAW-ready stems: Vocals, Drums, Bass, and Other.

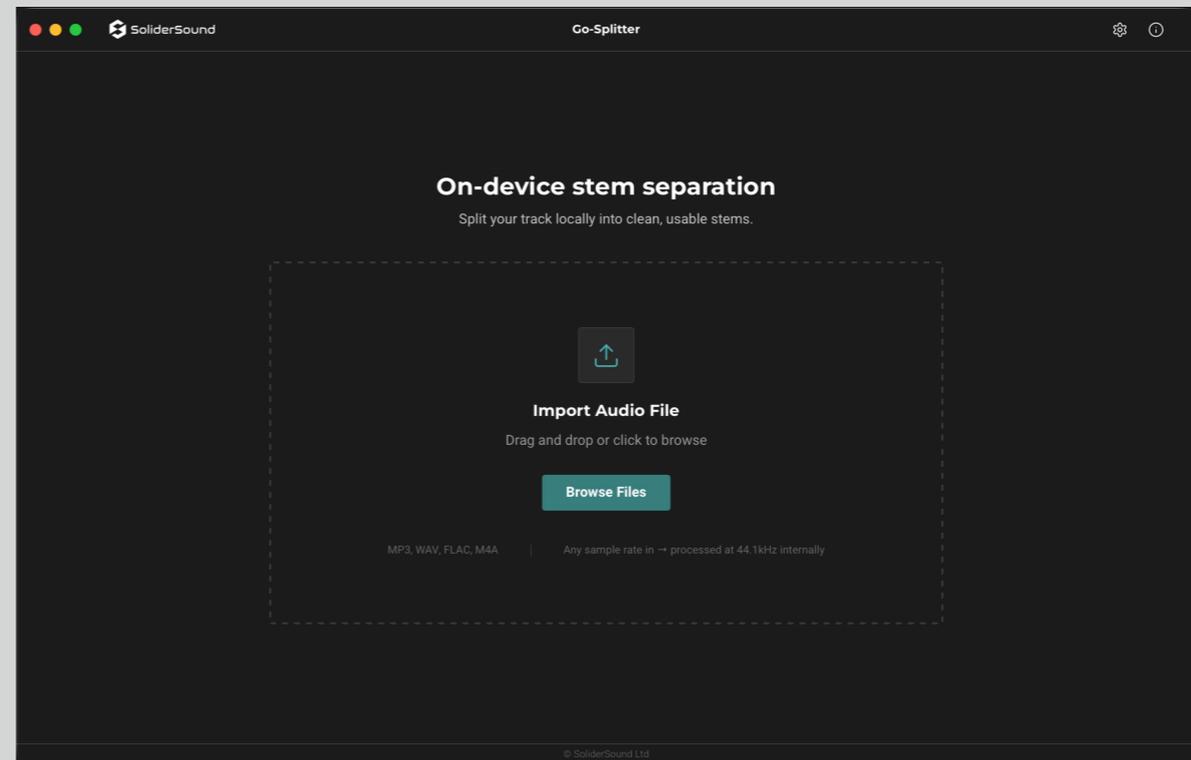

Processing runs on-device. Import a track, run separation, preview stems instantly, then download WAV stems or export a ZIP bundle.

- Outputs: 4 WAV stems (Vocals / Drums / Bass / Other).
- Preview-first mixer: waveforms + playback + master volume.
- Per-stem WAV download, plus Export All ZIP.
- Windows requirement: Windows 10 22H2 or Windows 11 (x64).
- ZIP exports are saved to ~/Downloads/Go-Splitter Exports/.

Quick start

- Download Go-Splitter for free from solidersound.com (create an account or sign in).
- Open the app and drag & drop a track, or click Browse Files.
- Wait for processing to complete.
- Preview stems in the mixer and scrub waveforms to check specific sections.
- Download WAV stems or click Export All to generate a ZIP bundle.

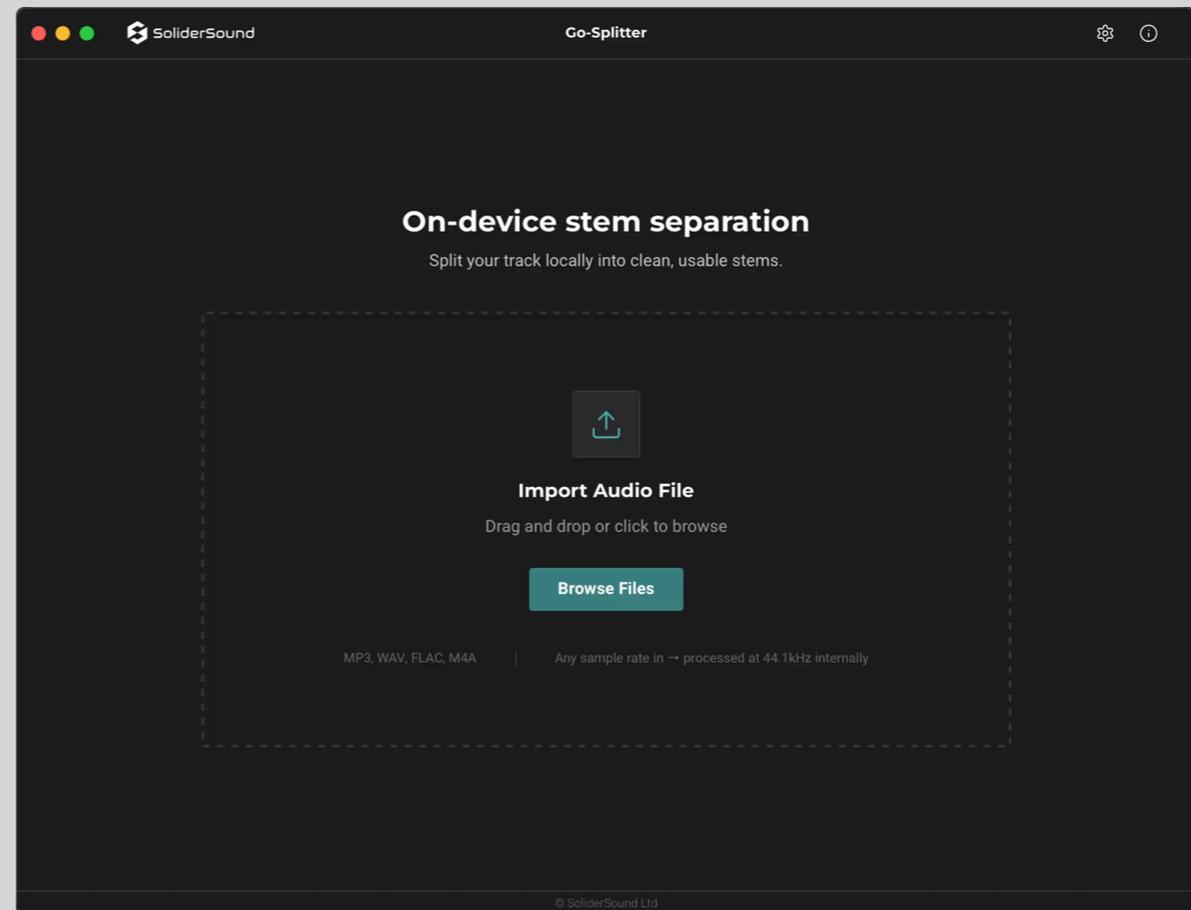

Importing audio

You can drag & drop a file into the import area, or click Browse Files.

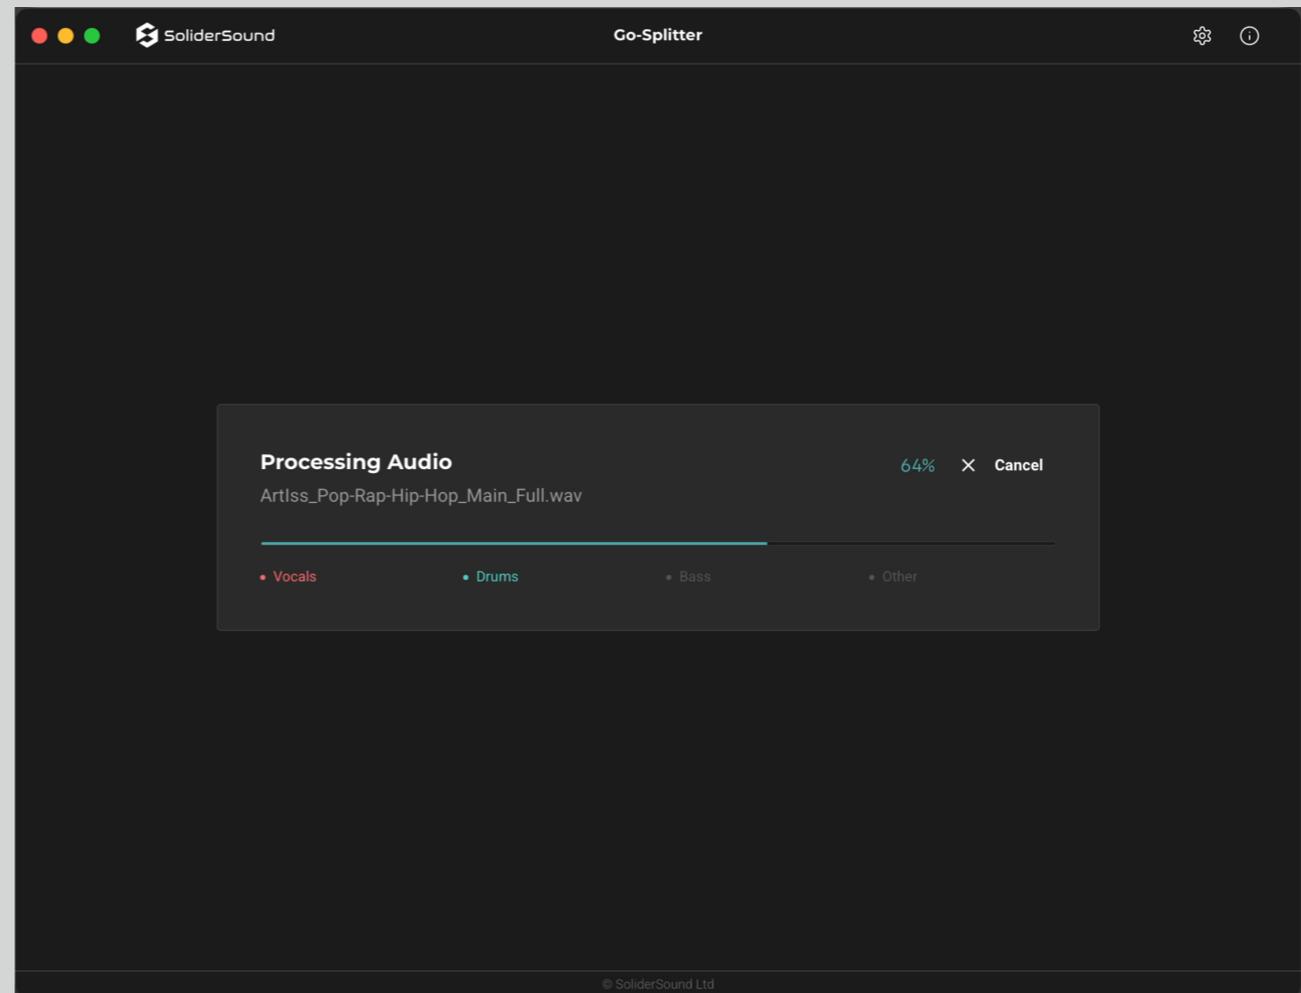

Supported formats: most common audio formats via ffmpeg (included), such as WAV, MP3, FLAC, and M4A/AAC.

Go-Splitter processes audio internally as 44.1kHz stereo WAV (it converts supported inputs automatically).

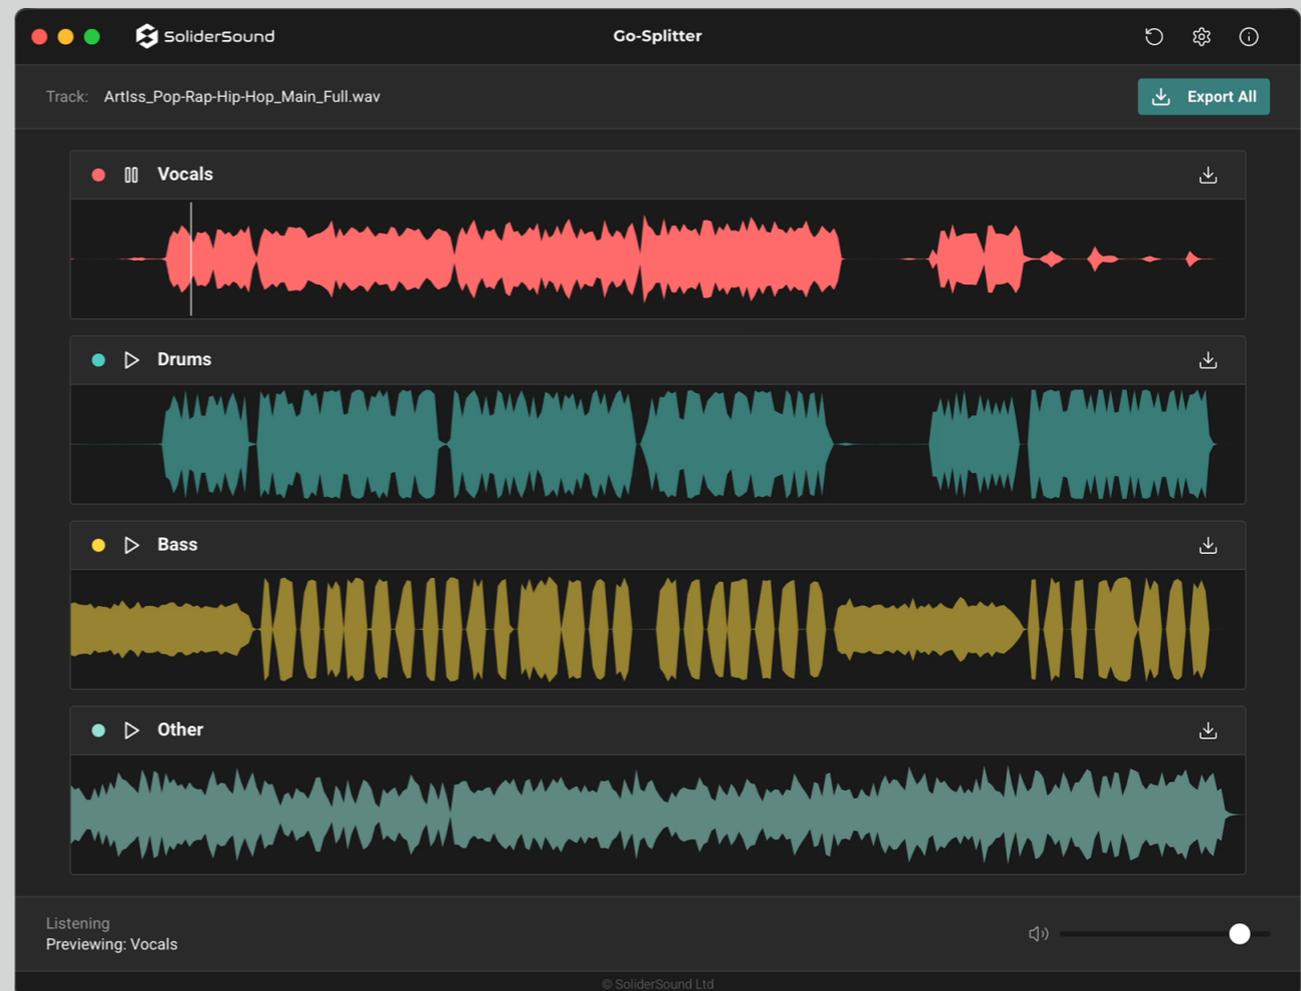

Processing

- A progress bar shows overall completion.
- Stage indicators reflect the current separation stage (Vocals, Drums, Bass, Other).
- You can cancel at any time.

Results mixer

- Each stem row includes waveform display and preview controls.
- Scrub the waveform (drag the playhead) to preview sections quickly.
- Use the download icon on a stem row to save that stem as a WAV.
- Use master volume for preview playback level.
- Export All creates a ZIP bundle of all stems.

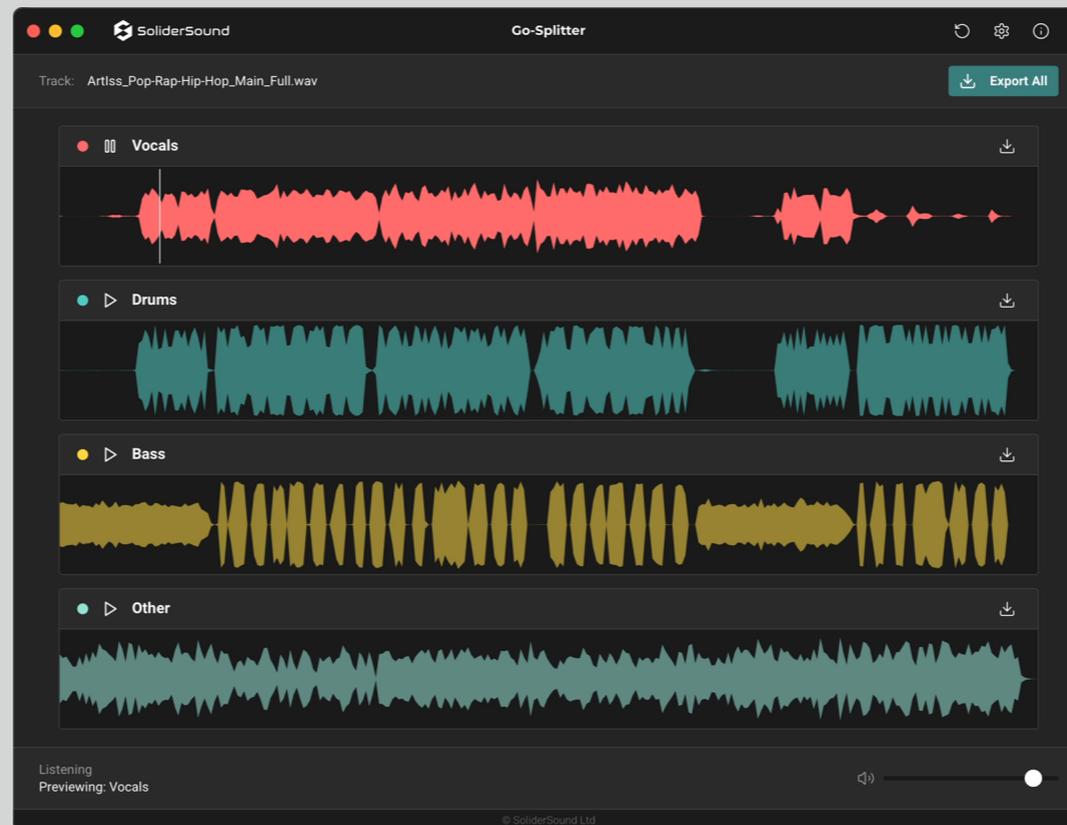

Exporting stems

From the results mixer, download any stem as a WAV file using the download icon on that row.

To export everything at once, click Export All to create a ZIP bundle containing all four stems.

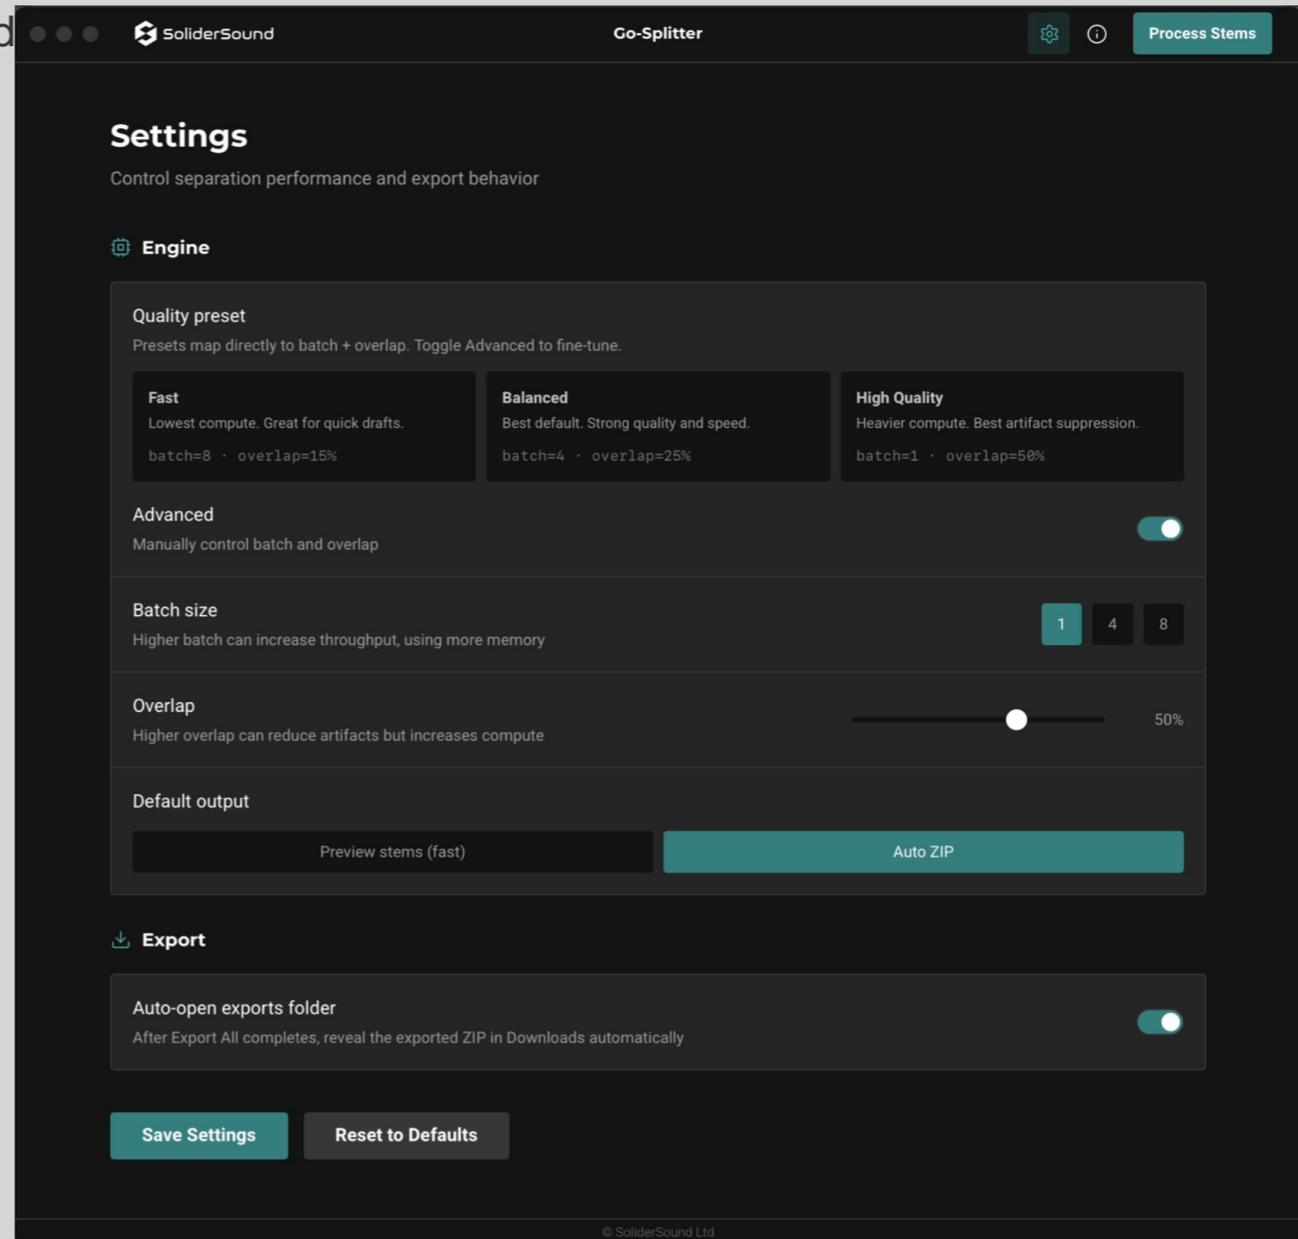

ZIP exports are saved to: ~/Downloads/Go-Splitter Exports/.

Quality & advanced

Separation quality is a tradeoff between speed and increase quality and re-run the split.

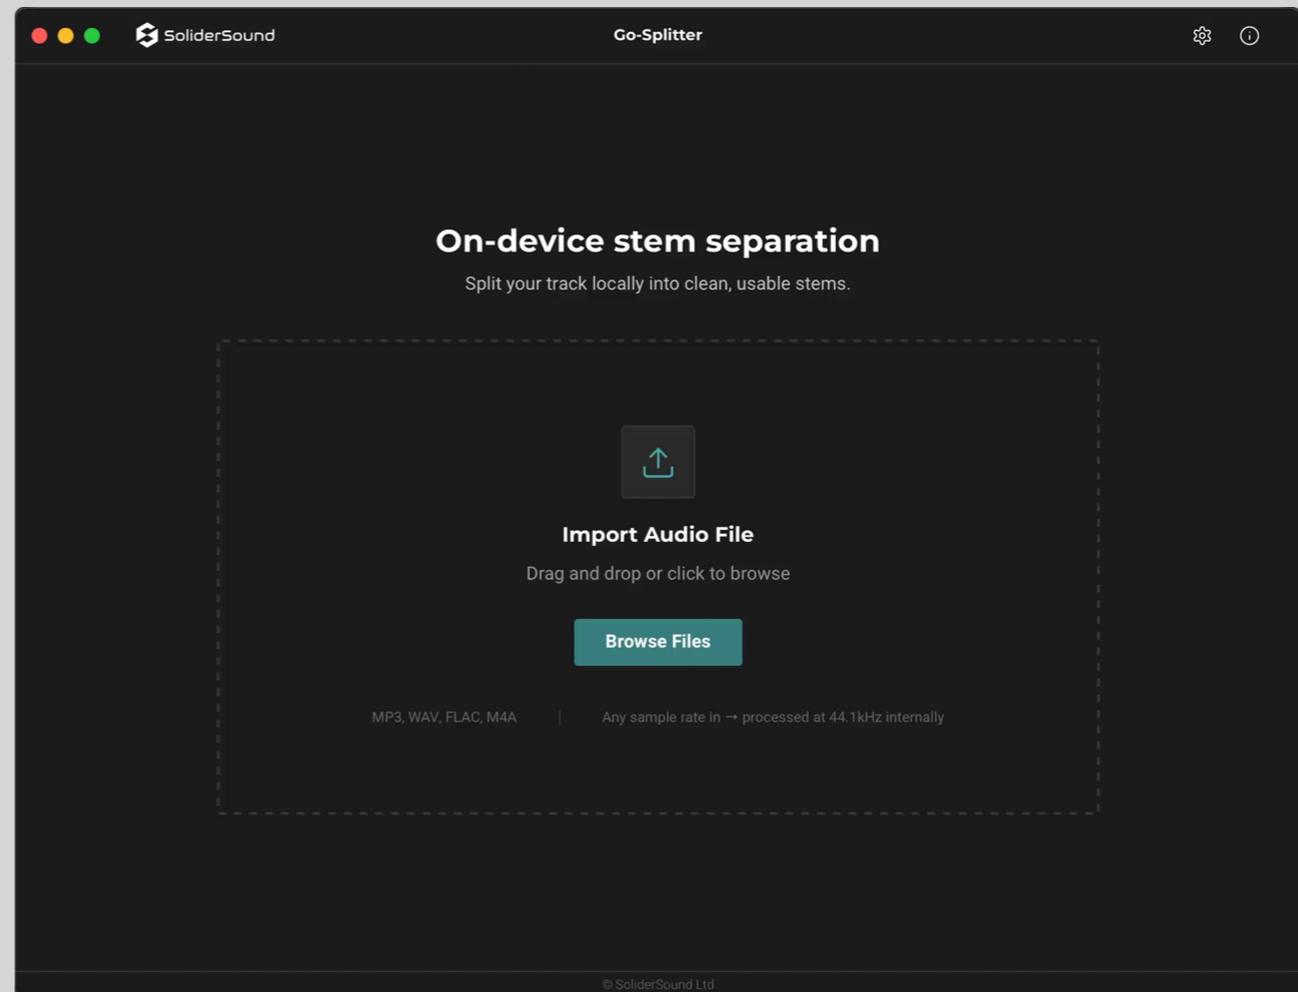

- Fast / Balanced / High Quality presets for quick control.
- Advanced controls for batch size and overlap.

Access & usage

Go-Splitter is available as a free download. Create a SoliderSound account (or sign in) on solidersound.com to download the app.

- No trial restrictions: process tracks with no usage limits.
- Export and downloads are available without plan gating.

Troubleshooting

Preparing... first run may take a minute: this is the engine provisioning step. If it fails, restart the app and try again.

Import or processing fails: export a 44.1kHz stereo WAV from your DAW and retry.
